The present invention describes a set of peroxidase genes found in plants, especially rice, and their homologues, modified forms and circumstants, where the sequences of the peroxidase genes in the set are given in ARH44071 to ARH44091. Also described are: (1) promoters for the control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a generating with a labelled peroxidase gene set, incubating, and cetecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene expression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and modification of rice plants to provide desired specificities of peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Page 171-174; 258pp; Japanese.

                                                                               The present sequence represents the cDNA sequence of a peroxidase P7X gene. The P7X gene is isolated from maize inbred line Mp307. Peroxidases reduce hydrogen peroxide or molecular oxygen in the presence of an electron donor. Plant peroxidases are involved in pathogen defence responses. DNA constructs or transcription cassettes comprising peroxidase P7X gene and its promoter are useful for providing nematode resistance in plants.
                                                                                                                                                                                                 Claim 1; Fig 3; 34pp; English.

                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                 δÃ
                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase genes and promoters; (3) analysis of plant, binding the RNA to a membrane, mixing with a labelled peroxidase gene set, incubating, and CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene expression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and conditication of rice plants to provide desired specificaties of peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics of the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics to the peroxidase gene expression to impart particular characteristics of the peroxidase gene expression to impart particular characteristics of the peroxidase gene expression to impart particular character
                                                                                                                                                                                                                                                                                                                                 Query

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes isolated polynucleotides and proteins cencoding and representing the enzymes cinnamate 4-hydroxylase (C4H).-CC commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (CCP), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-coA reductase (CCR), phenylalanine ammonia-lyase (pAL), 4-commarate:COA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC caffeic acid methyl transferase, caffecyl COA methyl transferase, caffecyl COA methyl transferase, caffecyl COA methyl transferase, classe, peroxidase, cytochrome p450 LXXIA, diphenol oxidase, flavanol commerate COA ligase, cytochrome p450 LXXIA, diphenol oxidase, flavanol commosition are involved in the lignin biosynthetic pathway. The composition and the structure of a plant, especially eucalyptus and pine composition and for modifying the activity of an enzyme involved in lignin content, composition and structure. They can be used for designing probes can be useful for detecting similar DNA and RNA sequences in any cransfers, and for PCR amplification. The lignin content can be efficiently composition and the polynucleotides. AAAB10449 represent polynucleotides. AAAB7908 to AAAB6301 and AAB16341 to CC exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    769
```

The present invention describes isolated polynucleotides and protein encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), commarate 3-hydroxylase (C3H), phenolase (PNL), commentyl transferase (OMT), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-CoA reductase

s and proteins kylase (C4H), L transferase

encoding and representing commarate 3-hydroxylase (

Claim 1; Page 187-188;

213pp; English.

Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus and pine species having altered lignin content, composition and

```
laccase, peroxidase, ferulate-5-hydroxylase (FHH), alpha-amylase, caffeld acid methyl transferase, caffeoyl coA methyl transferase, coumerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol glucosyl transferase, flavanoid hydroxylase, and isoflavone reductase, which are involved in the lighin biosynthetic pathway. The polynucleotides can be used for modulating lighin content, lighin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lighin biosynthetic pathway, and for producing a plant having altered lighin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any crganism and for PCR amplification. The lighin content can be efficiently analided using the polynucleotides. AAA69201 and AAB6341 to AAB6449 represent polynucleotides. AAA6998 to AAA68201 and AAB6341 to Canabitation of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ğ
                                               The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are CC given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using CC the genes and promoters; (3) analysis of plant characteristics using the CC peroxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed CC expression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and CC their component tissues and under different environmental conditions, CC and modification of rice plants to provide desired specificities of CC plants such as response to bacterial infection by Magnaporthe grisea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ohashi Y,

                                                                                                                                                                                                                                                                              .
                                                                                       Qy
                                                                                                                                                                                                                                             В
                                                                                                                     В
                                                                                                                                                δÃ
                                                                                                                                                                                                                                                                   The present invention describes isolated polynucleotides and proteins CC encoding and representing the enzymes cinnamate 4 -hydroxylase (C4H), CC commarate 3 -hydroxylase (C3H), phenolase (PNL), O-methyl transferase CC (CRR), phenylalanine ammonia-lyase (PAD), cinnamoyl-CoA reductase CC (CRR), phenylalanine ammonia-lyase (PAL), 4-commarate:COA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC caffeic acid methyl transferase, caffeoyl CoA methyl transferase, CC commerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol CC glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase, CC which are involved in the lignin biosynthetic pathway. The CC composition and the structure of a plant, especially eucalyptus and pine CC species, and for modifying the activity of an enzyme involved in lignin CC content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any cransism and for PCR amplification. The lignin content can be efficiently composition and the polynucleotides. AAA67908 to AAA68201 and AAB16341 to CC exemplification of the present invention.

Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially encalyptus and pine species having altered lignin content, composition and structure

Claim 1; Page 184; 213pp; English.

The present invention describes isolated polynucleotides and proteins composing and representing the enzymes cinnamate 4-hydroxylase (C4H), ccommarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (CGR), phenylalanine ammonia-lyse (PAL), cinnamoyl-coA reductase (CGR), phenylalanine ammonia-lyse (PAL), 4-commarate:CoA ligase (ACL), coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), ccinferol glucosyl transferase, caffeoyl coA methyl transferase, clavenoid hydroxylase, and isoflavone reductase, clavenoid hydroxylase, and isoflavone reductase, clavenoid hydroxylase, and isoflavone reductase, composition and the structure of a plant, especially eucalyptus and pine composition and for modifylng the activity of an enzyme involved in lighin content, composition and structure. They can be used for designing probes content, composition and structure in a plant having altered lighin content, composition and structure. They can be used for designing probes can deprimers useful for detecting similar DNA and RNA sequences in any cranism and for PCR amplification. The light content can be efficiently condified using the polynucleotides. AAA67908 to AAA68201 and ABB16341 to CC exemplification of the present invention sequences used in the

                           The present sequence is a synthetic Nicotiana sylvestris peroxidase gene which is optimised for expression in plants. The sequence may be introduced into plants to produce insect-resistant plants, preferably maize. It is useful for controlling insects such as ostrinia nubilalis, Heliothis zea and Spodoptera frugiperda. The transgenic seeds and plants can be used for the breeding of improved plant lines which, for example, increase the effectiveness of conventional methods such as harbicide or pesticide treatment or allow the conventional methods to be dispensed with. The peroxidase enzymes can be used in multiple insect control strategies, resulting in maximal efficiency with minimal impact on the
                                                                                                                                                                                                                                                                Novel anionic peroxidase genes isolated from Nicotiana tomentisiformis and anionic peroxidase protein encoded by the genes, useful for producing plants resistant to insects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tobacco; Nicotiana sylvestris; peroxidase;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a synthetic Nicotiana tomentisiformis peroxidase gene which is optimised for expression in plants. The sequence may be introduced into plants to produce insect-resistant plants, preferably maize. It is useful for controlling insects such as Ostrinia nubilalis, Heliothis zea and Spodoptera frugiperda. The transgenic seeds and plants can be used for the breeding of improved plant lines which, for example, increase the effectiveness of conventional methods such as herbicide or pesticide treatment or allow the conventional methods to be dispensed with. The peroxidase enzymes can be used in multiple insect control strategies, resulting in maximal efficiency with minimal impact on the environment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tobacco; Nicotiana tomentisiformis; peroxidase; insecticide; transgenic plant; insect-resistant plant; Ostrinia nubilalis; Heliothis zea; Spodoptera frugiperda; ds.

SalI adaptors were added to the ends, the ds-cDNAs were then digested with NotI and size-selected. These were directionally-cloned intothe zipLox phage vector, exised as plasmids, and then individually analyzed. "
